

Single Axis Robot

Technical Information

Multi Axis Robot

- Pick-and-place / Assembly / Grinding and Polishing / Semiconductor / Light Industry / Automotive industry / Food industry
- Articulated Robot
- Delta Robot
- Movable Delta Robot
- SCARA Robot
- Wafer Robot
- Electric Gripper

Single Axis Robot

Precision / Semiconductor / Medical / FPD

- KK, SK
- KS, KA
- KU, KE, KC

Direct Drive Rotary Table

- Aerospace / Medical / Auto industry
- RAB Series
- RAS Series
- RCV Series
- RCH Series

Ballscrew

Precision Ground / Rolled

- Super S series
- Super T series
- Mini Roller
- Ecological & Economical lubrication Module E2
- Rotating Nut (R1)
- Energy-Saving & Thermal-Controlling (C1)
- Heavy Load Series (RD)

Linear Guideway

Automation / Semiconductor / Medical

- Ball Type--HG, EG, WE, MG, CG
- Quiet Roller Type--QH, QE, QW, QR
- Other--RG, E2, PG, SE, RC

Medical Equipment

Hospital / Rehabilitation centers / Nursing homes

- Robotic Gait Training System
- Hygiene System
- Robotic Endoscope Holder

Bearing

Machine tools / Robot

- Crossed Roller Bearings
- Ball Screw Bearings
- Linear Bearing
- Support Unit

AC Servo Motor & Drive

Semiconductor / Packaging machine / SMT / Food industry / LCD

- Drives-D1, D1-N, D2
- Motors-50W-2000W

Torque Motor (Direct Drive Motor)

Inspection / Testing equipment / Machine tools/ Robot

- Rotary Tables-TMS,TMY,TMN
- TMRW Series

Linear Motor

Automated transport / AOI application / Precision / Semiconductor

- With Iron-core
- Coreless Type
- Linear Turbo LMT
- Planar Servo Motor
- Air Bearing Platform
- X-Y Stage
- Gantry Systems

Positioning Measurement System

Cutting machines / Traditional gantry milling machines / Programmable drilling machines

- High Resolution
- Signal Translator
- High-precision Enclosed
- High Efficiency Counter

Single Axis Robot General Overview

Warning

Single Axis Robots have both electrical and mechanical components, for safety, please read and follow all of the related precautions before selection and use. HIWIN is not held responsible for any malfunctions, damages, or accidents caused by the misuse of the product.

Personal Safety

- Single Axis Robots are designed for industrial purposes only.
- During operation, the user should stay clear of the Single Axis Robots mechanical range of motion to avoid possible injury.
- When the motor power is ON, people with pacemakers should keep away at least one meter to avoid any disturbance.
- To prevent fires, Single Axis Robots should not be placed near the ignition of flammable gases.

Storage and Installation

- Avoid any possible collisions or dropping of the product.
- When storing, it is recommended that the product be well packed and laid down flat. Do not expose the product to hot, cold or humid conditions.
- Do not disassemble or modify the products to avoid possible malfunctions or accidents.
- During installation, ensure the product is fixed correctly to avoid any loosening caused by vibrations.
- Take care when selecting the correct coupling and motor hardware for installation and be aware of the alignment to the centerline of the shaft when tightening the screws. Do not force the install.

Operation

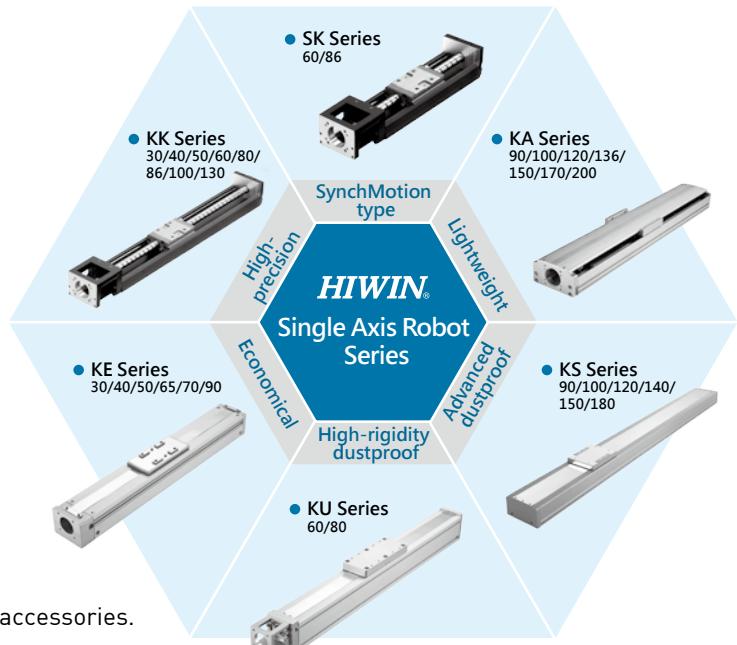

- The operation conditions need to be within the rated values as shown in the technical information.
- Avoid dust, debris and any foreign objects from entering the ball return system.
- Operational temperature should be under 80 °C. In high temperature environments above 80°C, please contact HIWIN sales.
- Confirm first with HIWIN sales if the product can be used in a special environment, such as: vacuum, vibration, clean room, corrosive chemicals, organic solvents, extreme high or low temperatures, humidity, liquid splashes, oil drops or mist, high salt, heavy load, vertical or cantilever installations.
- For vertical installations, when loaded, there is a possibility that the slider may fall. We recommend to adding proper braking and ensure functionality before operation.

Maintenance

- Lubricate the product before the initial use. Note the type of grease used and avoid mixing different types together.
- For normal operating conditions, it is recommended to check the operation every 100km, clean and supply grease onto the rail and shaft.

Introduction

The HIWIN Single Axis Robot module utilizes professional standard manufacturing technology developed over the years, with the ball screw and magnetic slide design module developed and produced by ourselves, HIWIN it is applicable to all types of automation equipment due to its features of easy installation, small size, high-precision and various specifications.

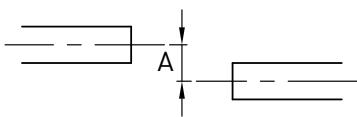

Features

- Complete selection of Single Axis Robots and accessories.
Drive Type: ballscrew, toothed belt
AC motor output: 30W~750W servo motor or stepping motor
Motor connection type (depends on available space): direct, bottom, internal, left, right
Max stroke: Max stroke on belt is 3000mm, minimum stroke on KK, KA and KE is smaller than 100mm.
- Easy installation and maintenance.
- Customized designs available.
- Easy transformation into a multi-axis robot.

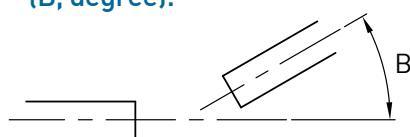

Installation guide for motor flange, motor and coupling

- Three types of displacement may exist while installing the ballscrew with motor axis, which are shown as below.

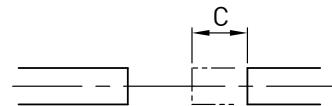

1. Radial displacement (A):

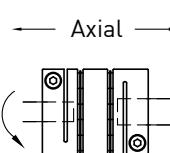

2. Angular displacement (B, degree):

3. Axial displacement(C):

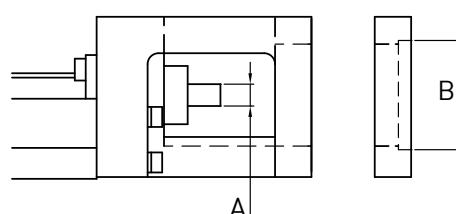

- Confirmation of axial alignment:

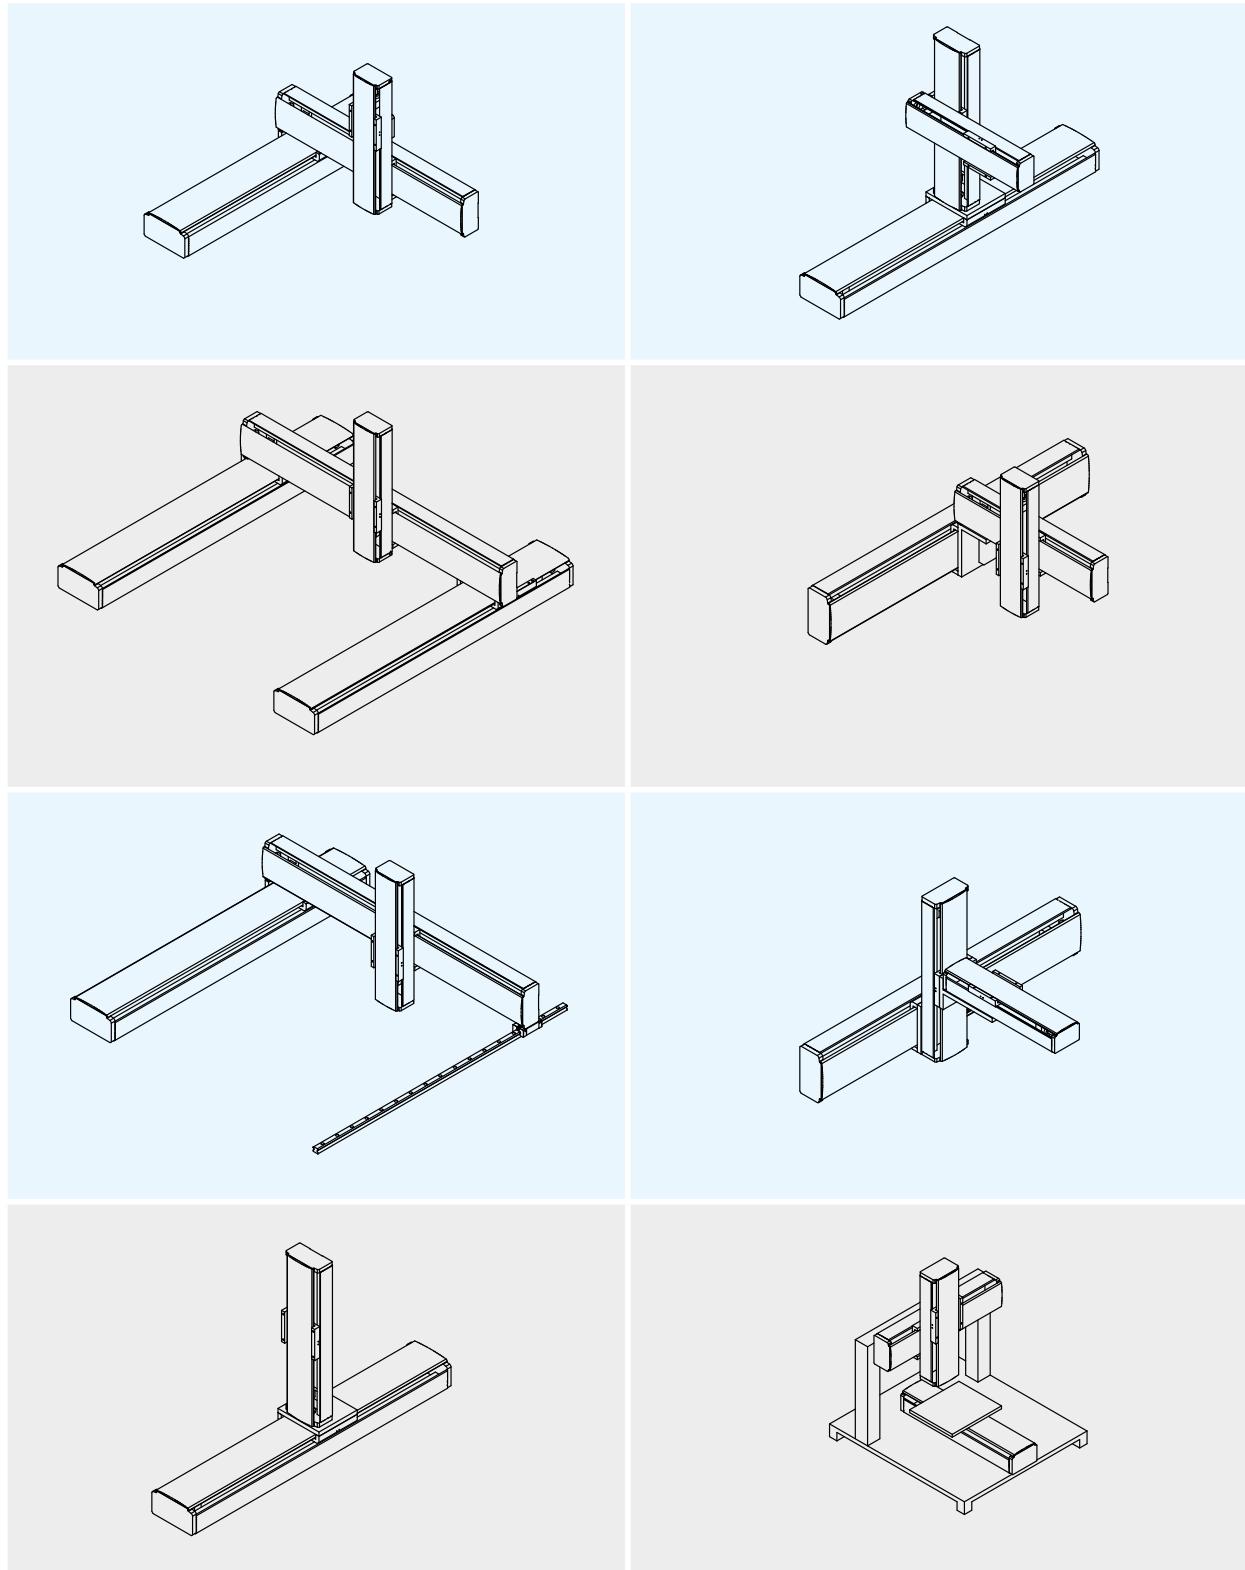

When the ballscrew shaft and motor are connected by a coupling, turn the coupling to confirm if it is capable of rotating without restrictions. This will ensure the concentricity of both axes. The illustration is shown as left.

- The use of a motor mounting jig might be necessary to make sure the ballscrew spindle end (A) and the positioning hole of the motor flange (B) are concentric. The illustration is shown below.

- Precaution:

1. During motor flange mounting, the displacement between ballscrew spindle end and the positioning hole of the motor flange should be controlled and also within the allowable displacement range of the chosen coupling.
2. The ballscrew spindle end could break if the displacement is beyond the allowable range limit or the coupling is mounted incorrectly.
3. Make sure the allowable displacement of the coupling is sufficient for your application, HIWIN recommends a Disk Type coupling. Please contact HIWIN with any questions regarding coupling installation or selection.

Applications

Single Axis Robots can be used in a wide range of applications. The following are examples of applicable systems: Automatic soldering system, screw feeding machine, adhesive laminating machine, CCD lens shifting, automatic paint spray machine, cutting machine, semiconductor manufacturing equipment, assembly equipment, press machine, spot welding machine, surface processing automation, self adhesive labeling machine, packaging machine, marking press machine, conveying equipment, and more.

Note: KA100/136/170 and KS100/140/180 can also be belt driven for applications requiring high speed and long stroke.

System Components

Single Axis Robot components include a motor, driver, and upper controller as demonstrated below. Our customers may choose from Hiwin's selection of excellent servo motors, stepping motors, and drivers.

Selection Process

When choosing an Single Axis Robot based on different conditions and restrictions, you may refer to the following selection process:

1. User requirements	5. Motor load calculation
<ul style="list-style-type: none"> <input type="radio"/> Effective stroke <input type="radio"/> Location restrictions (width, height, length) <input type="radio"/> Installation (horizontal, vertical, side mount) <input type="radio"/> Position of gravity, center of loading <input type="radio"/> Operating conditions (lead, speed, acceleration and deceleration, duty cycle) <input type="radio"/> Environment (high temperature, vibration, oil, water, corrosion) 	<ul style="list-style-type: none"> <input type="radio"/> Maximum speed <input type="radio"/> Motor resolution <input type="radio"/> Motor torque calculation
2. Demand for precision	6. Operation analysis
<ul style="list-style-type: none"> <input type="radio"/> Position accuracy <input type="radio"/> Repeatability <input type="radio"/> Running parallelism 	<ul style="list-style-type: none"> <input type="radio"/> Acceleration <input type="radio"/> Actual operation mode (V-T diagram)
3. Configuration	7. Other accessories
<ul style="list-style-type: none"> <input type="radio"/> Single axis <input type="radio"/> Multi axis <input type="radio"/> Special combination 	<ul style="list-style-type: none"> <input type="radio"/> The use of related accessories (limit switches, adapter plate, retractable sheath, the slip ring protection tube)
4. Motor selection	8. Final confirmation
<ul style="list-style-type: none"> <input type="radio"/> AC servo motor <input type="radio"/> Stepper motor <input type="radio"/> With or without brake (included, plug-in) 	<ul style="list-style-type: none"> <input type="radio"/> Conditions of use should be confirmed <input type="radio"/> Price, deadline <input type="radio"/> Alteration <input type="radio"/> Special requirements

For preliminary selection, you may refer to the following Single Axis Robot characteristics:

	KK, SK	KA	KS	KU	KE
Precision	Great (repeatability, positioning, parallelism)	Normal (repeatability)	Normal (repeatability)	Normal (repeatability)	Normal (repeatability)
Load	Heavy	Medium	Medium	Medium	Low
Weight	Heavy	Light	Light	Light	Light
Customized (stroke, plateform)	Yes	Yes	Yes	Yes	Yes
Stiffness	Good (steel structure)	Normal (aluminum alloy base)	Normal (aluminum alloy base)	Normal (aluminum alloy base)	Low(guide way base)
Cover	Aluminum	Aluminum	Stainless	Stainless	Stainless
Cleanliness	Normal	Normal	Great (with vacuum)	Good	Good
Dust-proof	Normal	Normal	Good (fully covered)	Good (fully covered)	Good (fully covered)
Drive component	Ballscrew (heavy load, good precision)	Ballscrew, belt (long stroke, high speed)	Ballscrew, belt (long stroke, high speed)	Ballscrew (heavy load, good precision)	Ballscrew (good precision)
Connection between motor and ballscrew	Direct, by side belt	Direct, by side belt	Direct, by side belt	Direct	Direct
Inside motor location	No	Yes	Yes	No	No
Bellow	Yes (standard)	Yes (customized)	No	No	No
Mounting	Top	Bottom (or top)	Bottom	Any position (bottom, side)	Bottom

Precision

1. Positioning accuracy

The maximum difference (absolute value) between the actual arrival distance and the reaching distance based on the original setting.

2. Repeatability of round-trip position (precision)

The maximum difference in the entire cycle. The difference in the positioning value measured from a setting position during the round trip movement of the Single Axis Robot's slider.

3. Running parallelism

- (1) The parallelism between Single Axis Robot module platform plane and module installation plane. Position the scale at the center of the slider, and then put the pointer on the installation plane. Finally, take the maximum deviation value measured in the full stroke as the result.
- (2) The parallelism between Single Axis Robot module platform and the installation datum. Position the scale at the center of the slider, and put the pointer on the installation datum. Finally, take the maximum deviation value measured in the full stroke as the result.

Speed

1. Maximum linear velocity

The Single Axis Robot's maximum linear velocity (V) is calculated from the ballscrew speed (S) multiplied by the lead (L)
 $V \text{ (mm/sec)} = S \text{ (rpm)} \div 60 \times L \text{ (mm)}$

2. Maximum rotational speed

The maximum allowable rotational speed of the ballscrew is decided by its critical rotational speed. If the ballscrew speed exceeds its critical speed it may result in resonance. Hence, the critical speed is related to the ballscrew length, the critical speed can help to determine the ballscrews effective stroke and total length.

The maximum allowable rotational speed of the ballscrew is calculated as follows:

$$N_p = 0.8 \times 2.71 \times 10^8 \times \frac{M_f d_r}{L_t^2}$$

Np = the maximum allowable rotation speed (rpm)
Mf = breakdown of the assembly mounting type; KA uses fixed-support type; Mf=0.689
dr = screw root diameter (mm)
Lt = screw span between bearings (mm)

3. Acceleration/Deceleration

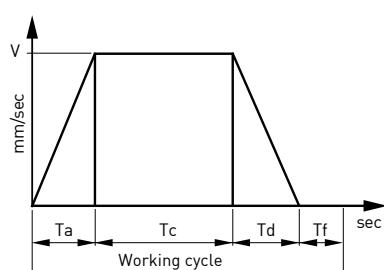

Speed is specified as the working speed of the sliding table. The sliding table must accelerate to the designated speed as it moves to its target position, in opposite, it must decelerate before it comes to a stop.

Acceleration/deceleration is programmed by the operator according to the needed conditions. The acceleration on a KA system is set at : 0.15G calculated for lead = 5, 0.3G is calculated for all other leads. 1G = 9.8m/s², therefore 0.15G = 1470mm/s², 0.3G = 2940mm/s². The maximum load shown in the catalog is based on this acceleration/deceleration.

*Attention : Acceleration/deceleration will generate an inertia force on the load. For higher acceleration/deceleration, load will increase accordingly. In addition, higher acceleration/deceleration could generate a possible impact and should be noted.

4. Working cycle

The SR system's working cycle is determined by the operator. The below diagram illustrates how the working cycle is generally calculated. The variables include acceleration time Ta, constant speed time Tc, deceleration time Td, and idling time Tf.

Accelerating Speed = v/T_a
 Decelerating Speed = v/T_d
 Working cycle (sec) = $T_a + T_c + T_d + T_f$
 Working time = working cycle × frequency
 Operating ratio = working time / (working time + off time)
 Operating ratio is closely related to the load of the motor.
 Normally, the operating ratio is not recommended to exceed 0.5 for long, continuous work.

Motor Loading Calculation

1. Confirm the moving conditions required by the loading mechanism, including acceleration, deceleration, the weight of the mechanism and it's movement.

2. Momentum loading calculation:

Momentum calculation for loads moving along a straight line

$$J_L = W \times \left(\frac{V}{2 \times \pi \times N \times 10} \right)^2 = W \times \left(\frac{\Delta S}{20 \times \pi} \right)^2$$

J_L : Momentum of load, calculated to the motors axial output (kg.cm^2)

V : Velocity of load along a straight line(mm/min)

ΔS : Displacement of load per motor rotation(mm)

W : Weight of load (kg)

N : Rotational speed of motor[r/min]

3. Select suitable specification of motor with the proportional principle per the momentums between load and motor.

4. Calculate the acceleration and deceleration torques per the momentum of the selected motor combined with the momentum of the load.

$$\text{Acceleration torque: } T_a = \frac{(J_L + J_M) \times N}{9.55 \times 10^4 \times T_{psa}}$$

$$\text{Deceleration torque: } T_d = \frac{(J_L + J_M) \times N}{9.55 \times 10^4 \times T_{psd}}$$

J_L : Momentum of load, calculated to the motors axial output (kg.cm^2)

J_M : Momentum of motor (kg.cm^2)

N : Rotational speed of motor (r/min)

T_{psa} : Acceleration/deceleration time(s)

T_{psd} : time (s)

5. Per the loads, installation methods, friction coefficients, and motor efficiency, calculate the torque at uniform motion.

$$T_L = \frac{F \times V}{2 \times 10^3 \times \pi \times \eta \times N} = \frac{F \times \Delta S}{2 \times 10^3 \times \pi \times \eta}$$

F : Axial force moving along a straight line

$$F = FC + \mu \times (W \times g + FO)$$

T_L : Load torque (N.m)

FC : External force exerted in the axial direction (N)

FO : External positive pressure exerted by the load onto the Single Axis Robot (N)

W : Load (including sliding platform) (kg)

μ : Friction coefficient

η : Mechanical efficiency

V : Velocity of load in a straight line (mm/min)

N : Rotational speed of motor (r/min)

g : Gravity (9.8m/s^2)

ΔS : Displacement of load per motor rotation (mm)

6. The maximum output torque of the selected motor should be larger than the sum of the acceleration torque and load torque; if this condition is not met, the model number needs to be changed and calculated until the requirement is satisfied.

7. Obtain the continuous effective torque per the load torque, acceleration torque, deceleration torque, and continuous torque.

$$T_{RMS} = \sqrt{\frac{T_a^2 \times T_{psa} + T_L^2 \times t_c + T_d^2 \times T_{psd} + T_{LH}^2 \times t_h}{T_f}}$$

T_{psa} : Acceleration time t_c : Constant speed time

T_{psd} : Deceleration time t_h : Stop time

T_f : Cycle time T_a : Acceleration torque

T_L : Load torque T_d : Deceleration torque

T_{LH} : Continuous torque (horizontal movement, $T_{LH}=0$)

8. The rated output torque of the selected motor should be larger than the continuous effective torque; if this condition is not met, the model number needs to be changed and calculated until the requirement is compliant.

Installation

If the ballscrew is used in the vertical direction (Z axis), the load should be within the maximum value indicated for vertical loading. Vertical installation using timing belts is forbidden.

*Attention : To prevent the load from slipping off, a brake system is recommended on the motor when the KA module is installed vertically.

Service life

For horizontal, side or slope (less than 30 degrees) orientation, the service life is dependent on the guideway, as for vertical orientation, the service life is dependent on the ballscrew or fixed bearing whichever one is shorter.

The listed dynamic load (F_y, F_z, M_x, M_y, M_z) is based on a service life of 10,000km of travel. If the load is less than the loading condition ($F_y/F_{yd} + F_z/F_{zd} + M_x/M_{xd} + M_y/M_{yd} + M_z/M_{zd} \leq 1$), the service life could be extended. If the load is over, the service life will be less than 10,000km. To ensure long term use, it is recommended that the loading be within the listed range.

Maintenance

All the related accessories, ballscrew and guideway need to be maintained. After every 3 months or 100km travel distance, it is recommended to add grease to the ballscrew and guideway. Clean any dust or debris from the system. Replace the grease if there is any color change. If you have any further questions, please contact HIWIN.

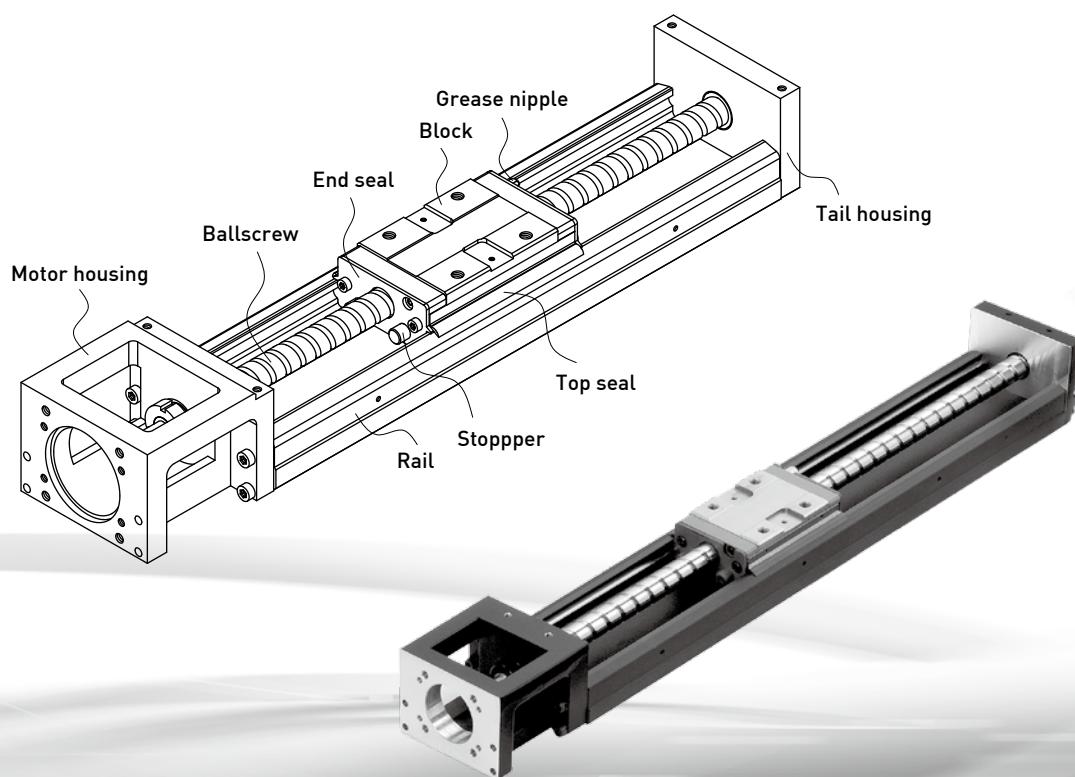

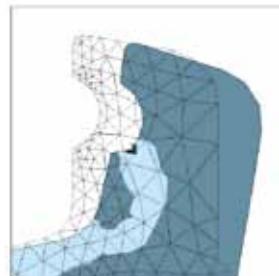

Single Axis Robot

KK Series

The HIWIN KK Single Axis Robot is driven by a ballscrew while a guideway slides on an optimized U-rail to achieve higher accuracy and greater stiffness.

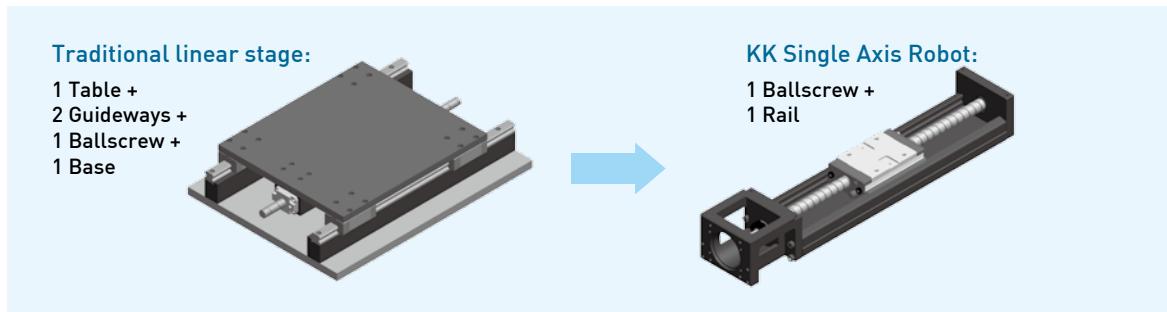

1.1 Features

- An integrated system
- Easy installation and maintenance
- Compact and lightweight
- High accuracy
- High stiffness
- Complete line of accessories

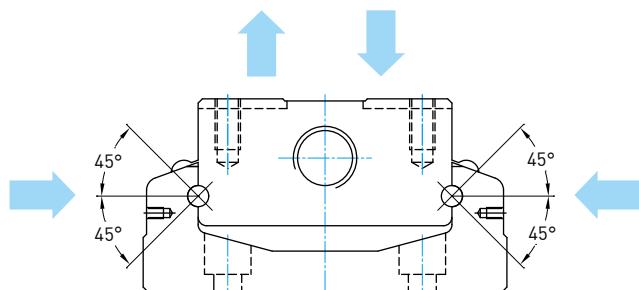

1.1.1 Modulization

The KK Single Axis Robot integrating a ballscrew and guideway forms a modularized product. The modularized design can help customers save time, cost and system inspection. Therefore, installation efficiency and a space-saving design are also promoted.

1.1.2 Equivalent Load

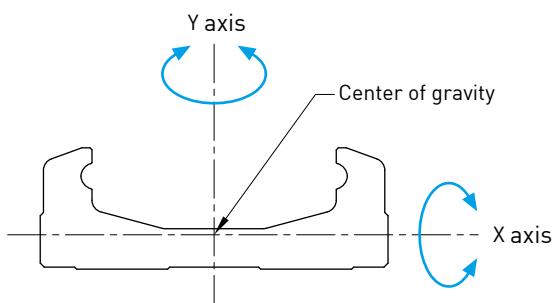

The gothic arch contact design sustains load from all directions and offers high rigidity and accuracy.

1.1.3 High Stiffness

Using finite element analysis on the U-shaped cross section allows the volume and rigidity to be made balanced, therefore, a high rigidity rail, compact design and a light weight design are also accomplished simultaneously.

Moment of inertia		Unit:mm ⁴
Model no.	I _x	I _y
KK30	7.554 x 10 ²	12.726 x 10 ³
KK40	3.533 x 10 ³	5.317 x 10 ⁴
KK50	9.6 x 10 ³	1.34 x 10 ⁵
KK60	2.056 x 10 ⁴	2.802 x 10 ⁵
KK80	6.711 x 10 ⁴	8.444 x 10 ⁵
KK86	7.445 x 10 ⁴	1.134 x 10 ⁶
KK100	1.296 x 10 ⁵	2.035 x 10 ⁶
KK130	2.546 x 10 ⁵	5.073 x 10 ⁶

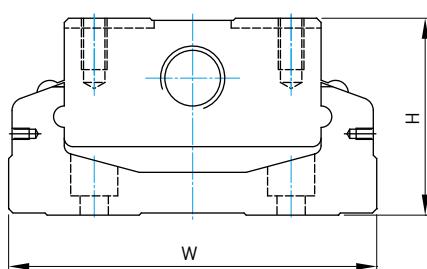

I_x : Moment of inertia computed about X axis

I_y : Moment of inertia computed about Y axis

1.1.4 Various Specification

KK Single Axis Robots of various specifications are developed, providing customers with different choices relating to space and loading conditions.

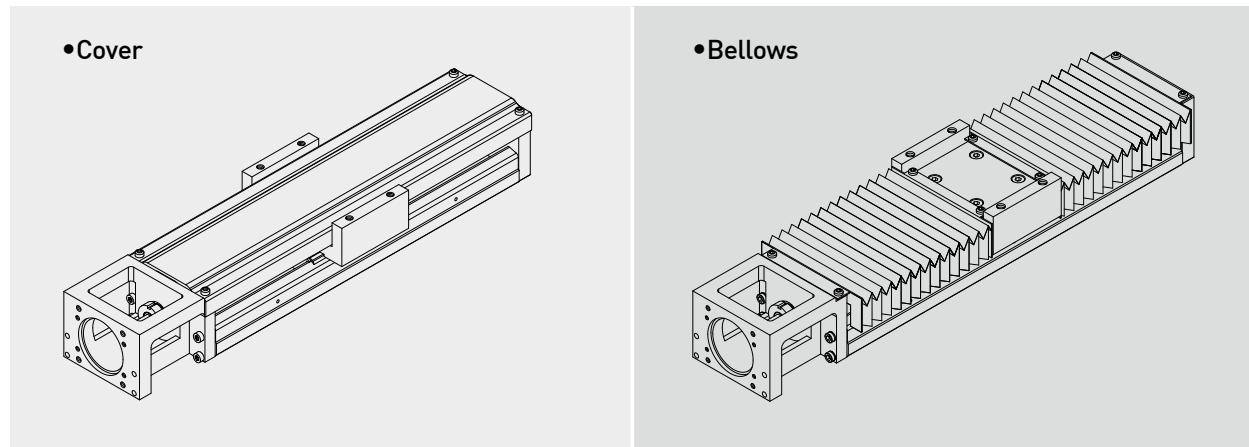

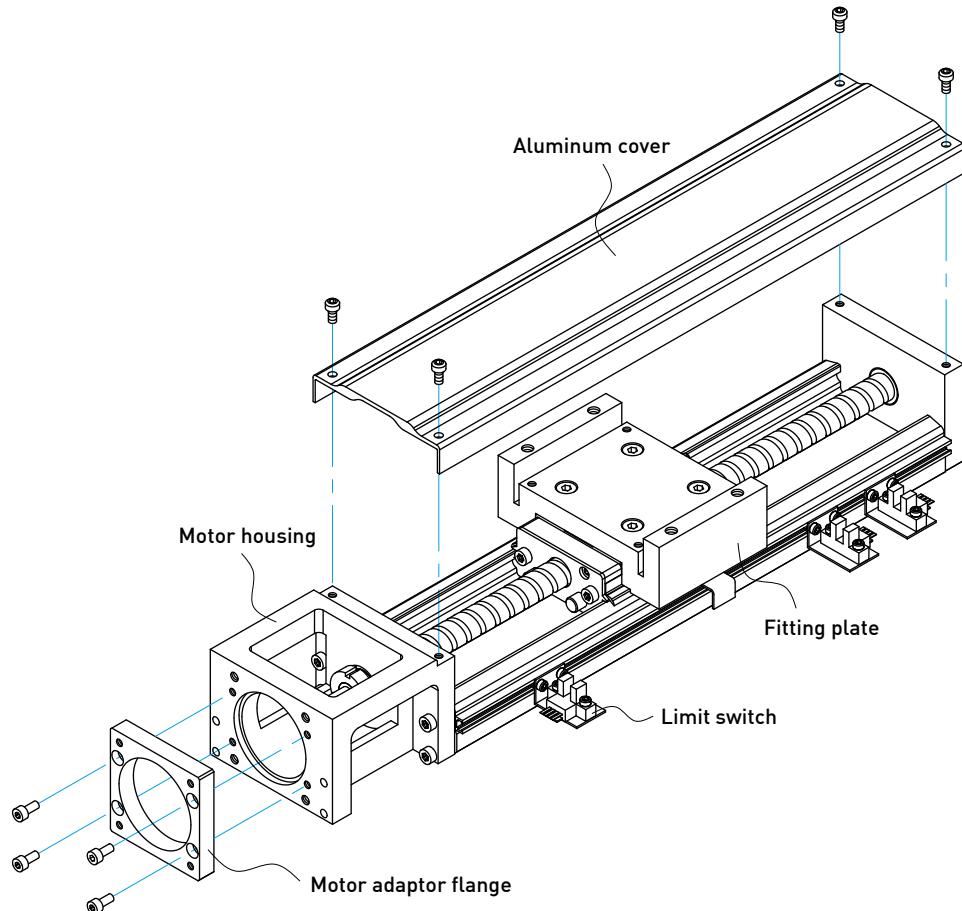

Model no.	W	H
KK30	30	15
KK40	40	20
KK50	50	26
KK60	60	33
KK80	80	45
KK86	86	46
KK100	100	55
KK130	130	65

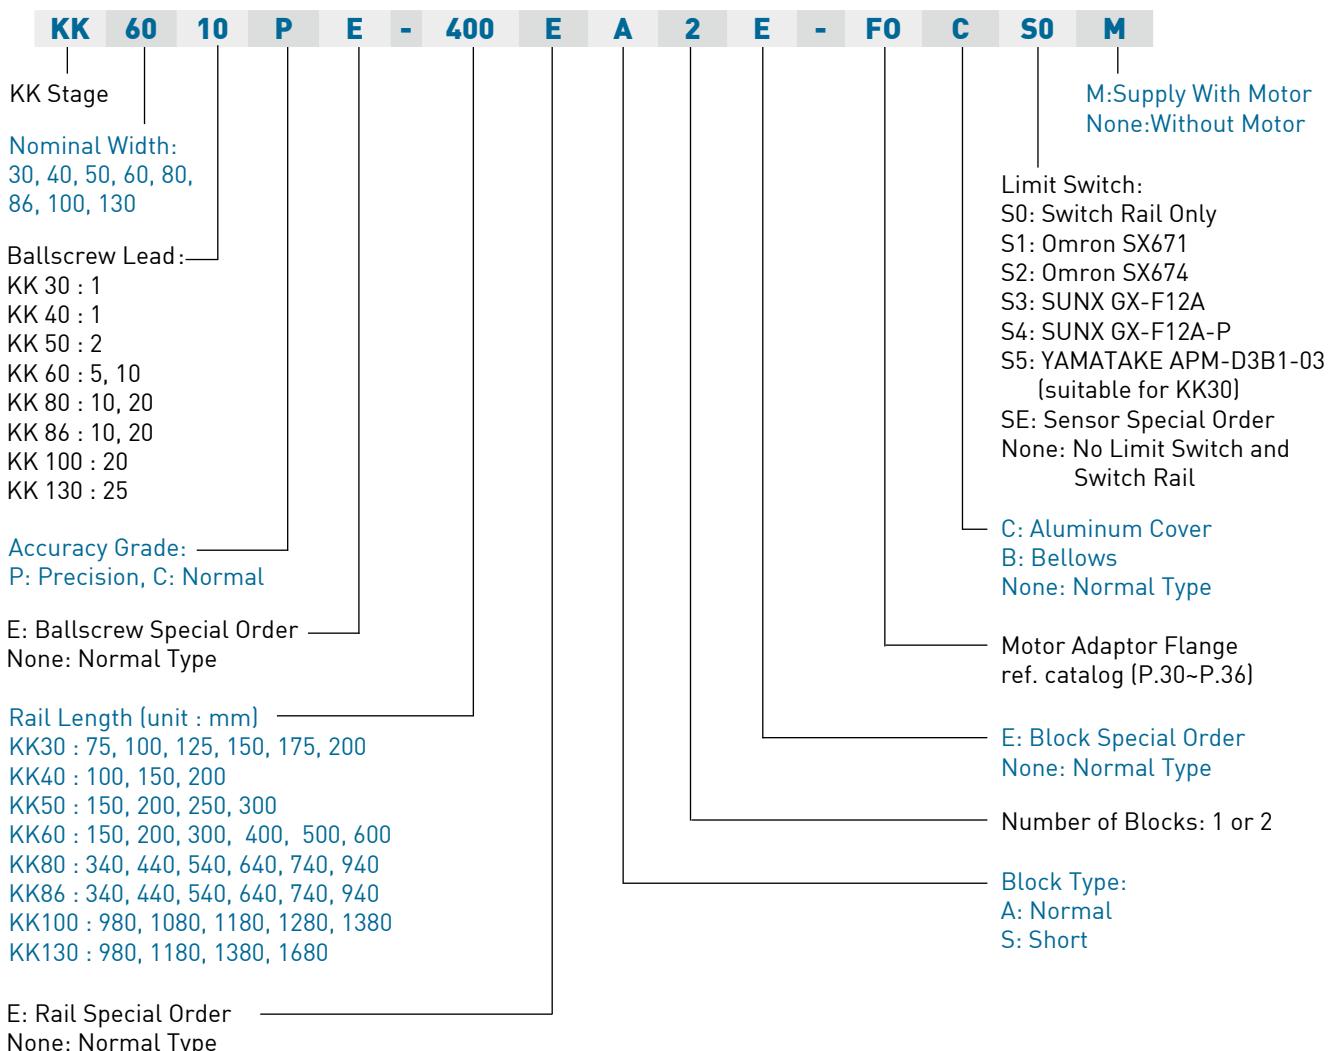

1.2 Accessories

Accessories of KK Single Axis Robot are also supported for specific demands, such as an aluminum cover, bellows, motor adaptor flange and limit switchs.

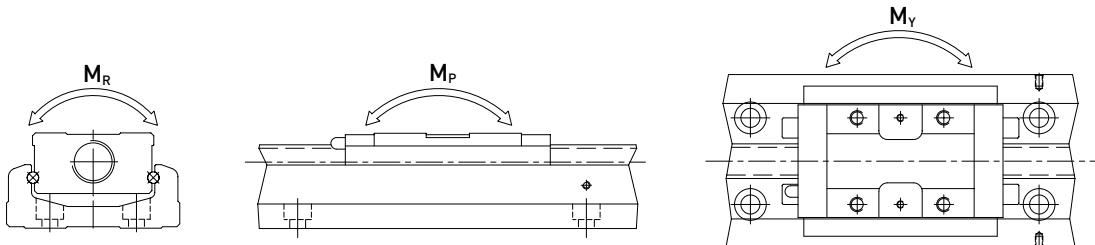

- Aluminum cover and bellow: contamination protection
- Motor adaptor flange: connection for different types of motors
- Limit switchs: starting point, positioning and other safety matters

1.7 Life Calculations

1.7.1 Service Life

Under repeated stress between the raceway and the rolling elements, pitting and flaking will occur as it reaches fatigue failure. The service life of the KK Single Axis Robot is defined as the distance traveled before any failure of the raceway or rolling elements appear.

1.7.2 Nominal Life (L)

The service life varies greatly even when the KK units are manufactured in the same way or operated under the same conditions. For this reason, nominal life is used as the criteria for predicting the service life of a KK unit.

1.7.3 Nominal Life Calculation

The calculating formulas are divided into two parts, guideway and ballscrew. The smaller value of the two would be the recommended nominal life of the KK unit.

Nominal life formulas for both the guideway and ballscrew depend on several parameters and are shown below.

Guideway

$$L = \left(\frac{f_t}{f_w} \cdot \frac{C}{P_n} \right)^3 \times 50 \text{ km}$$

L : Life Rating (km)
 f_t : Contact Coefficient (ref. Table 1)
 f_w : Loading Coefficient (ref. Table 2)

C : Basic Dynamic Load Rating (N)
 P_n : Calculated Loading (N)

Table 1

Block Type	Contact Coefficient f_t
A1, S1	1.0
A2, S2	0.81

Table 2

Operating Condition		Loading Coefficient f_w
Thrust and Vibration	Velocity (V)	
No Thrust	V < 15m/min	1.0 ~ 1.5
Low Vibration	15m/min < V < 60m/min	1.5 ~ 2.0
High Vibration	V > 60m/min	2.0 ~ 3.5

Ballscrew and Bearing

$$L = \left(\frac{1}{f_w} \cdot \frac{C_a}{P_{a,n}} \right)^3 \times 10^6 \text{ rev}$$

L : Life Rating (rev.)
 f_w : Loading Coefficient (ref. Table 2)

C_a : Basic Dynamic Load Rating (N)
 $P_{a,n}$: Axial Loading (N)

1.8 Lubrication

Insufficient lubrication of the guideway would lead to a reduction of the service life.

The lubricant provides the following functions:

- Reducing rolling friction and avoiding abrasion
- Providing a lubricating film and extending the service life
- Anti-rusting

1.8.1 Lubricating Grease

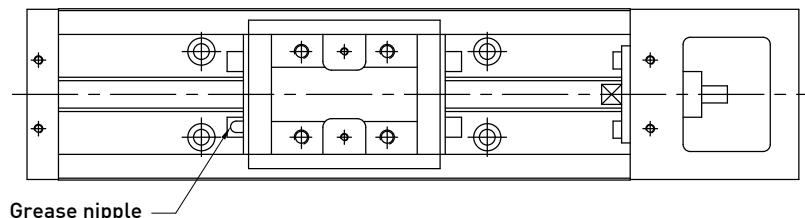

Re-lubricating the KK Single Axis Robot every 100km is recommended. Generally, grease is applied for speeds under 60 m/min. For operating speeds over 60 m/min, a grease with a higher viscosity should be used.

$$T = \frac{100 \times 1000}{V_e \times 60} \quad T : \text{Lubricating frequency (hrs)}$$

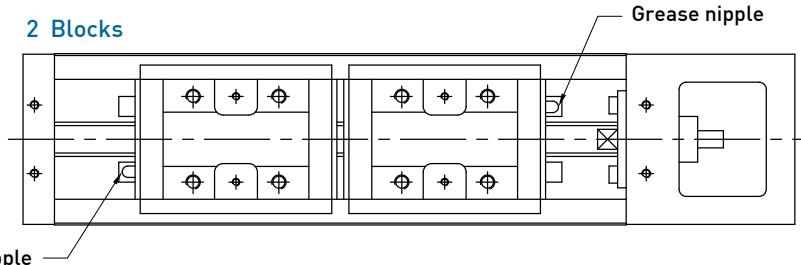

V_e : Speed (m/min)

1.8.2 Grease Nipple

1 Block

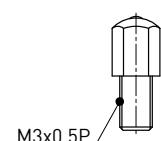

2 Blocks

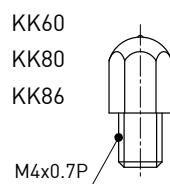

Types of grease nipple

Single Axis Robot

SK Series

The HIWIN SK quiet Single Axis Robot with SynchMotion™ Technology offers quieter operation, smooth movement, low particle emission rate, longer service life and superior lubrication. With the SynchMotion™ Technology, SK Single Axis Robots will be more suitable for industries which require higher speeds and quieter performance.

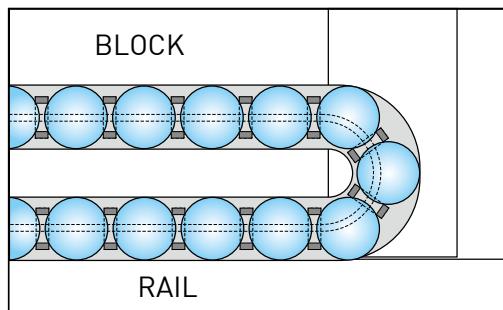

2.1 Features

- Low noise
- Low particle emission rate
- Longer service life
- Superior lubrication
- Easy installation and maintenance

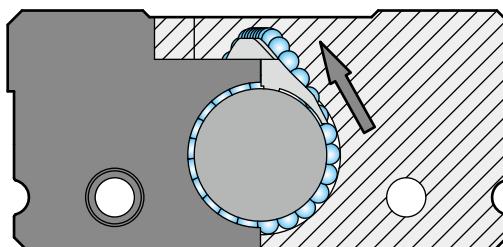

2.1.1 SynchMotion™ Technology

With SynchMotion™ Technology, the rolling elements are interposed between the partitions of SynchMotionTM to provide improved circulation. By eliminating the contact between the rolling elements, collision noise and sound levels are greatly reduced.

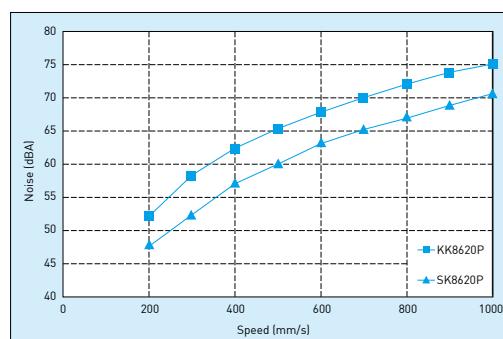

2.1.2 Tangent Circulation Technology

The rolling elements enter the circulation system by following the spiral pathway. When compared to the traditional external circulation, the Tangent Circulation Technology diminishes the impact caused by the rolling elements entering the circulation system, improving the speed, acceleration and smoothness while reducing the noise.

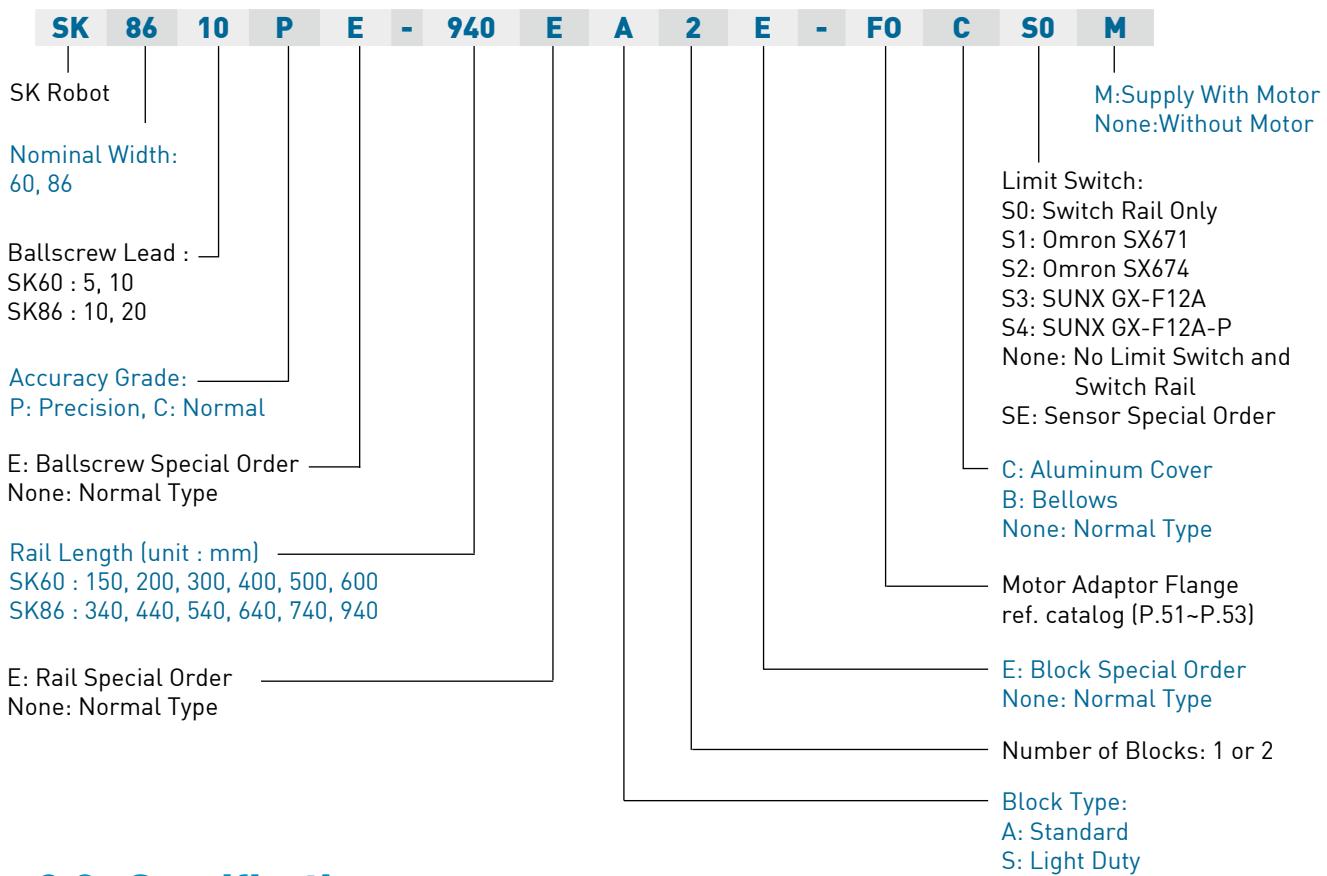

2.1.3 Noise Test

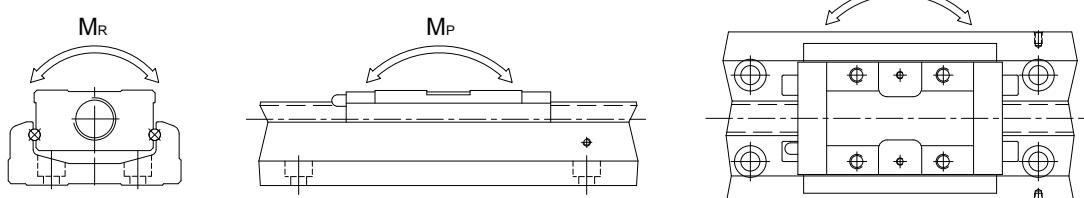

Incorporating both SynchMotion™ Technology and Tangent Circulation Technology, the noise reduction is about 3~5 dB during operation.

2.2 Model Number of SK Series

2.6 Life Calculations

2.6.1 Service Life

Under repeated stress between the raceway and the rolling elements, pitting and flaking will occur as it reaches fatigue failure. The service life of the SK Single Axis Robot is defined as the distance traveled before any failure of the raceway or rolling elements appear.

2.6.2 Nominal Life (L)

The service life varies greatly even when the SK units are manufactured in the same way or operated under the same conditions. For this reason, nominal life is used as the criteria for predicting the service life of a SK unit.

2.6.3 Nominal Life Calculation

The calculating formulas are divided into two parts, guideway and ballscrew. The smaller of the two values would be the recommended nominal life of the SK unit.

Nominal life formulas for both the guideway and ballscrew depend on several parameters as shown below:

Guideway

$$L = \left(\frac{f_t}{f_w} \cdot \frac{C}{P_n} \right)^3 \times 50 \text{ km}$$

L : Life Rating (km) C : Basic Dynamic Load Rating (N)
 f_t : Contact Coefficient (ref. Table 1) P_n : Calculated Loading (N)
 f_w : Loading Coefficient (ref. Table 2)

Table 1

Block type	Contact Coefficient f_t
A1, S1	1.0
A2, S2	0.81

Table 2

Operating Condition		Loading Coefficient f_w
Thrust and Vibration	Velocity (V)	
No Thrust	$V < 15\text{m/min}$	1.0 ~ 1.5
Low Vibration	$15\text{m/min} < V < 60\text{m/min}$	1.5 ~ 2.0
High Vibration	$V > 60\text{m/min}$	2.0 ~ 3.5

Ballscrew and Bearing

$$L = \left(\frac{1}{f_w} \cdot \frac{C_a}{P_{a,n}} \right)^3 \times 10^6 \text{ rev}$$

L : Life Rating (rev.) C_a : Basic Dynamic Load Rating (N)
 f_w : Loading Coefficient (ref. Table 2) $P_{a,n}$: Axial Loading (N)

2.7 Lubrication

Insufficient lubrication of the guideway would lead to a reduction of the service life.

The lubricant provides the following functions:

- Reducing rolling friction and avoiding abrasion
- Providing a lubricating film and extending the service life
- Anti-rusting

2.7.1 Lubricating grease

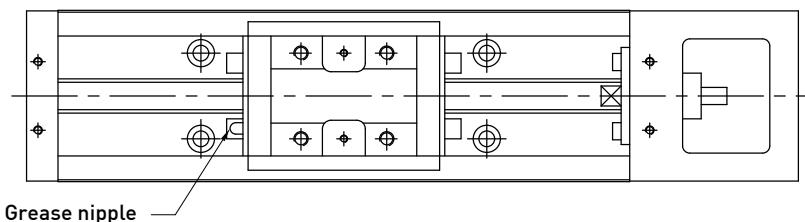

Re-lubricating the SK Single Axis Robot every 100km is recommended. Generally, grease is applied for speeds under 60 m/min. For operating speeds over 60 m/min, a grease with a higher viscosity should be used.

$$T = \frac{100 \times 1000}{V_e \times 60} \quad T : \text{Lubricating frequency (hrs)}$$

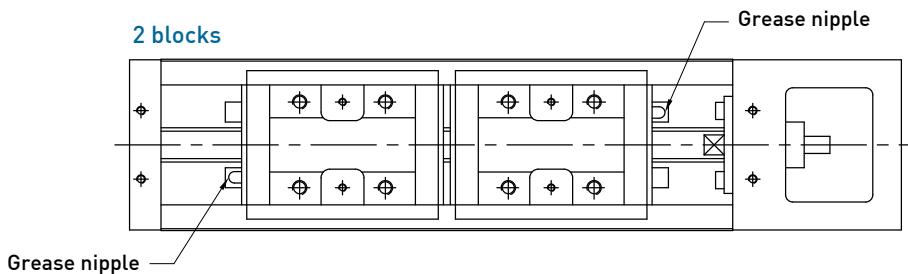

V_e : Speed (m/min)

2.7.2 Grease nipple

Single Axis Robot

KA Series

3.1 Features

- Lightweight and high rigidity aluminum base
- Easy system installation and maintenance
- Complete selection of accessories for most applications
- Customized design

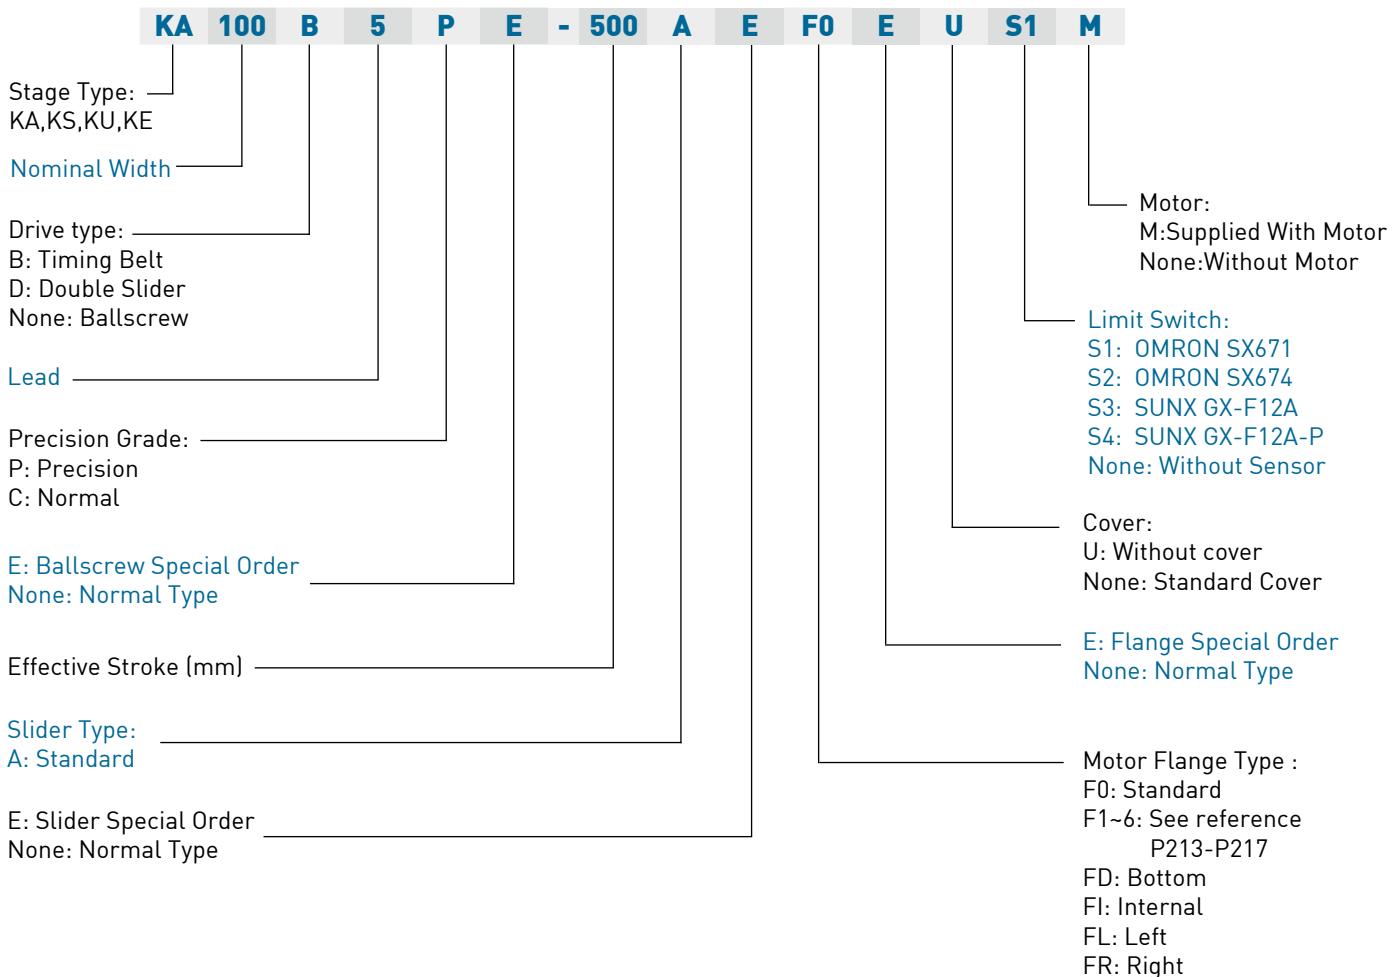

3.2 Applications

- Precision industry
- FPD industry
- Conveying equipment
- Inspection & testing equipment
- Assembly equipment

3.3 Model Number of Single Axis Robot Series

3.4 Specifications

The KA series designation is represented by the following:

(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Model	Lead	Precision Grade	Effective Stroke	Slider Type	Motor Flange	Aluminum Cover	Limit Switch	Motor

(1) Model

KA is the designation for all KA models and the number represents the width of the aluminum base.

(2) Lead

The lead on the ballscrew, in millimeters, indicates how far a sliding table will travel with a complete rotation of the ballscrew. The following table shows the current available ballscrews for the KA series :

KA Model	KA136												KA200											
	KA100						KA170																	
Ballscrew diameter (Φ)	15			16			20			25			32			25								
Lead (P)	10	20	40	5	10	32	5	10	20	40	25	50	32	40	10	25								
L (available in left hand thread)		*	L	L	*	L		L	*	*	*	*	*	*	*	*								

*Please contact HIWIN for high lead screws, left-hand thread screws, or any unlisted ballscrew.

(3) Precision Grade

The precision grade for the sliding table to repeat the same position after traveling back and forth.

C; Normal grade : $\pm 0.02\text{mm}$, P; Precision grade : $\pm 0.01\text{mm}$.

The repeatability is measured by the largest error occurred at any point when the sliding table is traveling back and forth.

* Attention : KA products do not indicate the absolute positional accuracy.

(4) Effective Stroke

The travel range for the KA sliding table (in millimeters).

* Attention : Vibration might occur when the effective stroke is longer than what is listed in the catalog. If vibration occurs, reduce the RPM to help improve the situation. Refer to the "Speed" section for information regarding RPM values.

(5) Slider Type

The KA series is designed to only support the listed loading. Please contact HIWIN for inquiries on greater dynamic load or heavy load models.

(6) Motor Flange

Direct connection is the standard type on the KA series. There are different flange options for adapting different types of motors, please refer to the following table.

	KA100		KA136		KA170		KA200	
	Screw	PCD	Screw	PCD	Screw	PCD	Screw	PCD
F0	M3	40	M4	60	M5	70	M6	90
	M4	46	M5	70				
F1	M3	45	M4	70	M6	90	M5	70
F2			M4	46	M5	90	M5	90
F3			M3	45	M6	<input type="checkbox"/> 70		
F4			M5	90	M6	<input type="checkbox"/> 69.58		
F5			M4	<input type="checkbox"/> 50				
F6			M4	<input type="checkbox"/> 47.14				

FD : Bottom connected motor (belt pulley drive).

FI : Internal connected motor (coupling drive).

FL : Left connected motor (belt pulley drive).

FR : Right connected motor (belt pulley drive).

Please refer to the Appendix for different flange sizes.

(7) Aluminum Cover

All standard KA models are equipped with an aluminum protective cover. U : without aluminum cover.

(8) Limit Switch

HIWIN provides some standard options for limit switches. Please contact a HIWIN sales representative for any other type that is not listed.

(9) Motor

No mark : motor not included. Please inform HIWIN in advance when installing a motor provided by the customer.

M : motor included. Please refer to the Appendix for motor selection, for other customized motors please contact a HIWIN sales representative.

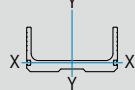

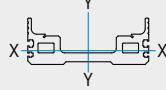

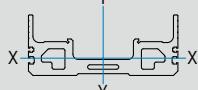

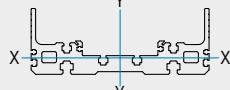

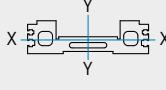

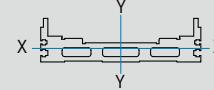

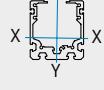

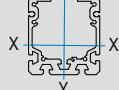

3.5 KA Specifications

Series	Drive Type	Aluminum Base Width	Motor Choice	Maximum Load (Kg)*1												Motor Connection Type	Model

		70				20	15						5	4			F0, F1	KE70-
		90	200W			25	23						6	5			F0~F6	KE90-

*1. Maximum mass refers to the maximum load value the stage could sustain. Load center is just above the sliding table.

2. The belt driven KA is to be used in horizontal applications. Maximum linear velocity of 1800 mm/sec.

3.6 U-shaped aluminum base features a light weight construction and high rigidity

Series	Moment of Inertia (mm ⁴)	I _{xx}	I _{yy}	
KA	KA100	2.17x10 ⁵	1.81x10 ⁶

* Operating Speed and Stroke for reference only. If effective stroke requirement is longer than standard stroke available in the above chart, please contact HIWIN.

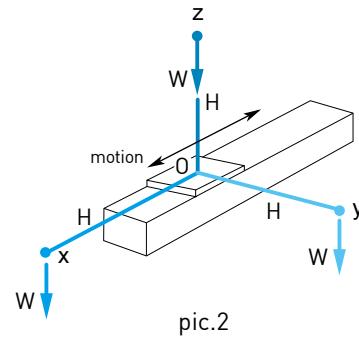

3.8 Dynamic Load

Several factors affect the calculation of loads acting on a KA system as shown in the figure below. The dynamic loads indicated in the catalog (F_y , F_z , M_x , M_y , M_z) are calculated based on 10,000 km of travel distance. To obtain the correct load value and maintain the service life of the KA, each load condition should be carefully considered.

The below figure shows the load being applied onto the center of the KA sliding table. In fact, the load is not necessarily in the middle during its operation, and if the load is not on the center, there could be potential vibrations, over torque, or slow reaction.

pic.1

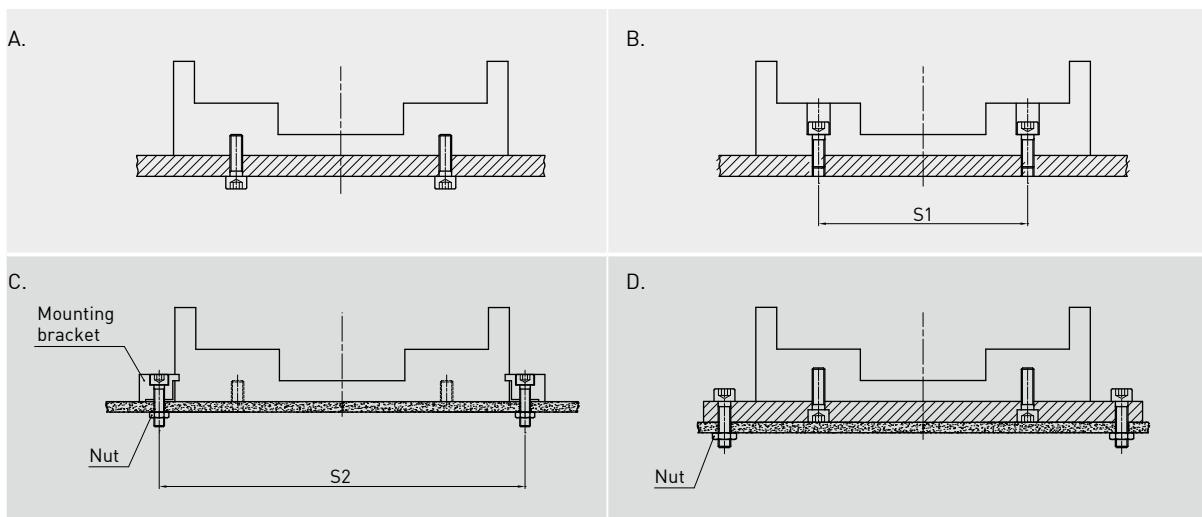

pic.2

To avoid these circumstances, please keep the loading (W) close to the center of the sliding table(O) within the distance(H).

	H (mm)		
Off Center Distance	x	y	z
KA100	550	550	550
KA136	550	550	550
KA170	780	780	780
KA200	900	900	900

3.9 Installation Method

There are several installation methods for the KA series as shown in the following figures.

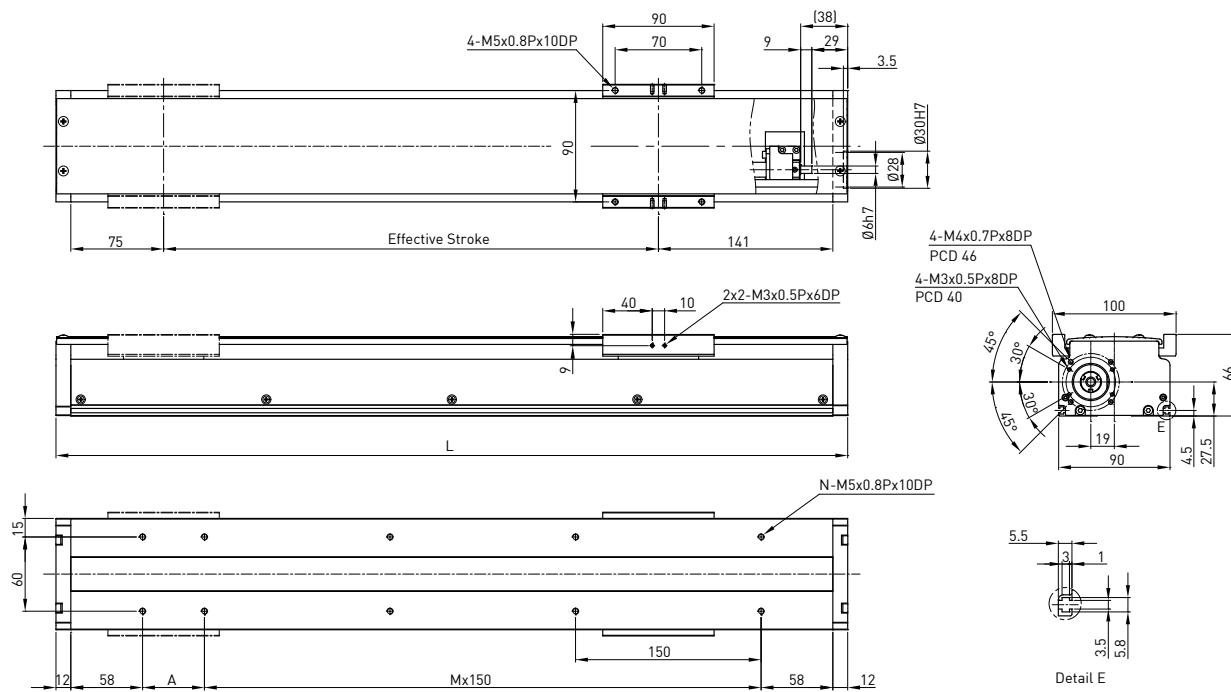

The table below indicates the distance between fixing screws, (S1) on type B and (S2) on type C (fixing from above):

KA Model	S1	S2	Screw
KA100	80	116	M5
KA136	112	150	M6
KA170	136	186	M8
KA200	162	218	M8

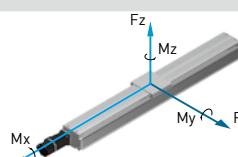

3.8 KA Series

Single Axis Robot KS Series

4.1 Features

- For use in clean room
- Stainless steel cover
- Already installed AC servo motor (optional)
- High repeatability $\pm 0.02\text{mm}$
- Dustproof
- Different strokes available

4.2 Applications

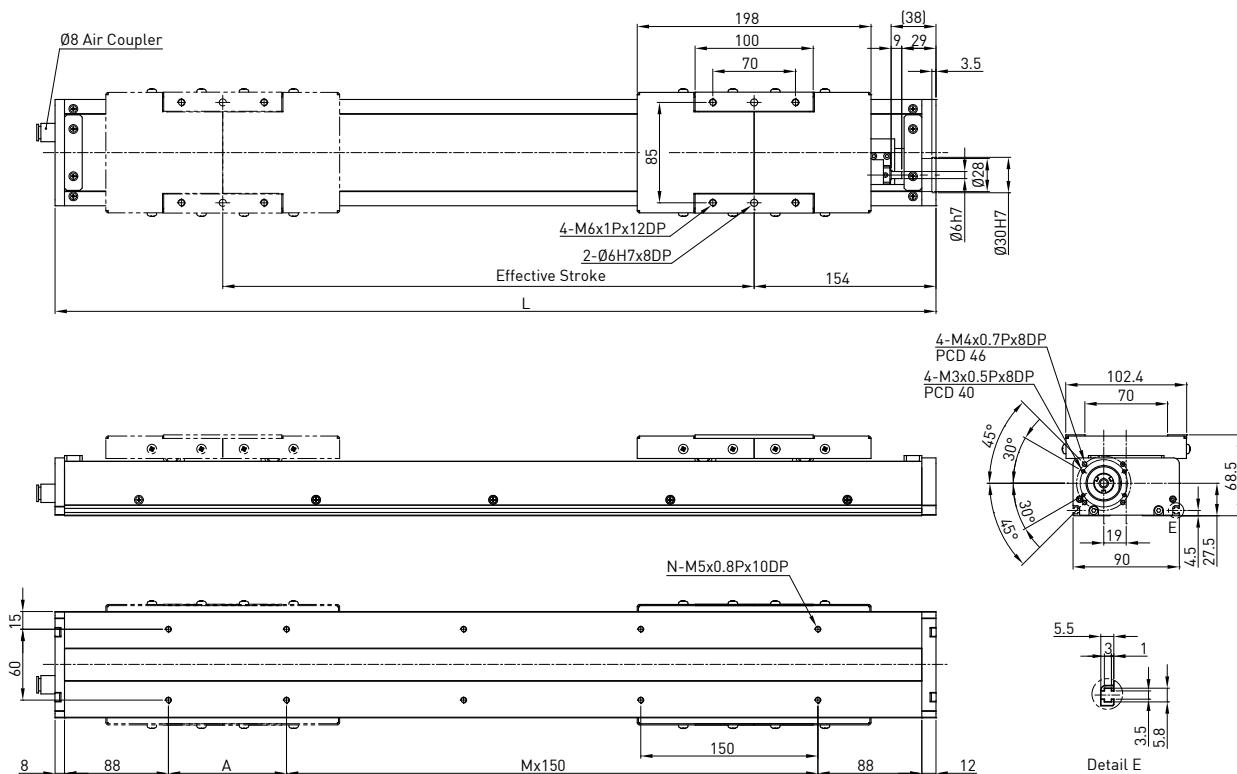

- FPD industry
- Semiconductor
- Medical applications
- FPD glass transfer
- Inspection & testing equipment

4.3 KS Series

						Myd		N-m	5	4.5
						Mzd		N-m	2.3	2.1
Permitted load condition***						$\frac{F_y}{F_{yd}} + \frac{F_z}{F_{zd}} + \frac{M_x}{M_{xd}} + \frac{M_y}{M_{yd}} + \frac{M_z}{M_{zd}} \leq 1$				
						Fy, Fz, Mx, My, Mz are working loads				

* Vibration might occur when the effective stroke is longer than 650mm.

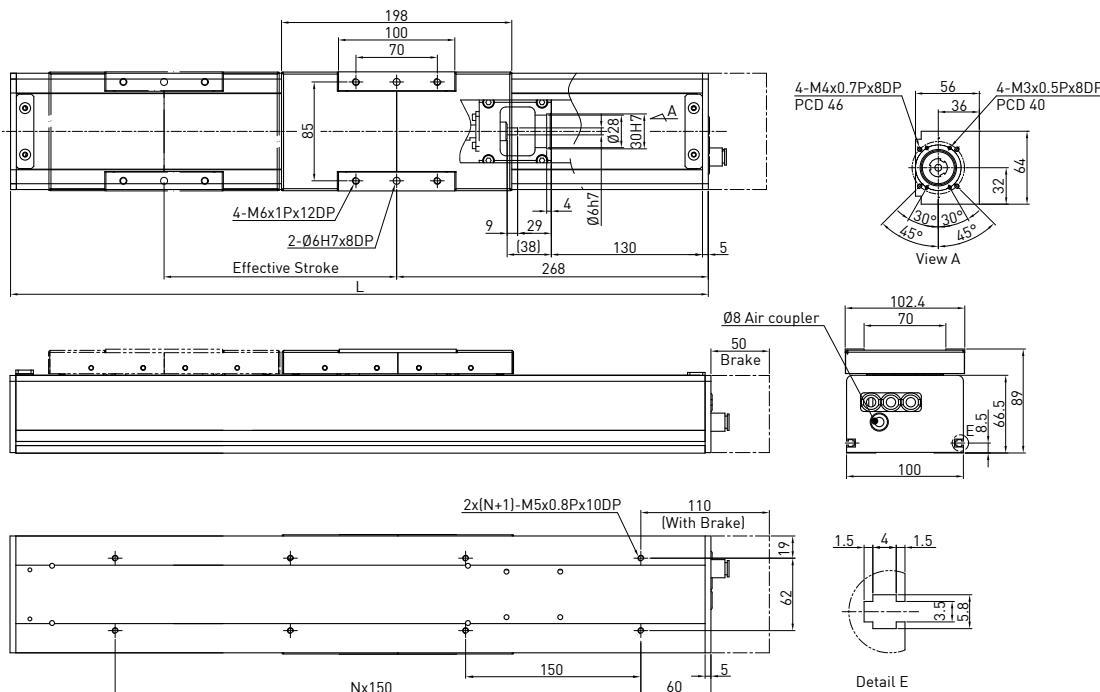

The maximum speed should be decreased by 15% for every 100mm of increased stroke.

** The load condition is based on 10,000km operation.

*** If used on the vertical axis or in a special condition, please contact HIWIN.

Model Number for KS100-FI

KS100	-20	P	-800	A	FI	S2	M
Model	Lead	Precision Grade	Effective Stroke	Slider Type	Motor Flange	Limit Switch	Motor
	10mm 20mm	P: Precision C: Normal		A: Standard	FI: Internal	S2: OMRON SX674 None: No Limit Switch	M: Supplied With Motor None: Without Motor

Effective stroke [mm]	L	N	Weight (kg)	AC motor output		W	100				
				Drive	Ballscrew C7(normal)		mm	5	10	20	
200	600	3	9.1	Lead			RPM	3000	3000	3000	
300	700	4	9.8	Rated RPM			mm/sec	250	500	1000	
400	800	4	10.5	Max linear speed*			N	280	140	70	
500	900	5	11.2	Rated thrust			mm	±0.02			
600	1000	6	11.9	Repeatability			mm	200~800			
700	1100	6	12.6	Effective stroke			kg	8	6	3.5	
800	1200	7	13.3	Max load (H)							
				Rated dynamic load**	Fy	N	20	20	20		
					Fzd	N	80	60	35		
					Mxd	N-m	1.1	1.2	1.1		
					Myd	N-m	0.9	0.9	0.9		
					Mzd	N-m	0.9	0.9	0.9		
				Permitted load condition***	$\frac{F_y}{F_{yd}} + \frac{F_z}{F_{zd}} + \frac{M_x}{M_{xd}} + \frac{M_y}{M_{yd}} + \frac{M_z}{M_{zd}} \leq 1$						
					Fy, Fz, Mx, My, Mz are working loads						

* Vibration might occur when the effective stroke is longer than 650mm.

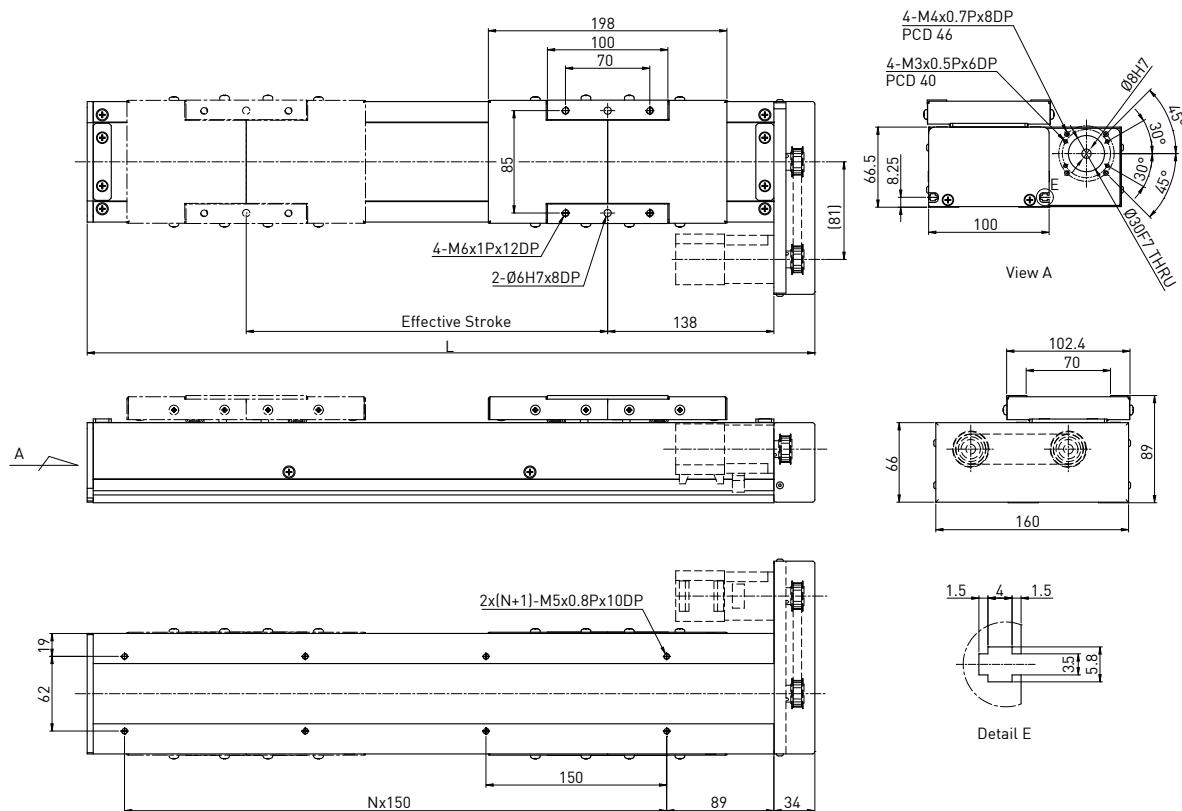

The maximum speed should be decreased by 15% for every 100mm of increased stroke.

** The load condition is based on 10,000km operation.

*** If used on the vertical axis or in a special condition, please contact HIWIN.

Model Number for KS100-FL

KS100	-20	P	-800	A	FL	S2	M
Model	Lead	Precision Grade	Effective Stroke	Slider Type	Motor Flange	Limit Switch	Motor
	10mm 20mm	P: Precision C: Normal		A: Standard	FL: Left	S2: OMRON SX674 None: No Limit Switch	M: Supplied With Motor None: Without Motor

Effective stroke (mm)	L	N	Weight (kg)	AC motor output			W	100		
				Drive	Lead	Ball screw C7(normal)		mm	5	10
200	504	2	6.0	Rated RPM			RPM	3000	3000	3000
300	604	3	6.9	Max linear speed*			mm/sec	250	500	1000
400	704	3	7.8	Rated thrust			N	280	140	70
500	804	4	8.7	Repeatability			mm	±0.02		
600	904	5	9.6	Effective stroke			mm	200~800		
700	1004	5	10.5	Max load (H)			kg	8	6	3.5
800	1104	6	11.4	Rated dynamic load**	F _y d	N	20	20	20	
					F _z d	N	80	60	35	
					M _x d	N·m	1.1	1.2	1.1	
					M _y d	N·m	0.9	0.9	0.9	
					M _z d	N·m	0.9	0.9	0.9	
				Permitted load condition***	$\frac{F_y}{F_{y,d}} + \frac{F_z}{F_{z,d}} + \frac{M_x}{M_{x,d}} + \frac{M_y}{M_{y,d}} + \frac{M_z}{M_{z,d}} \leq 1$					
					F _y , F _z , M _x , M _y , M _z are working loads					

* Vibration might occur when the effective stroke is longer than 650mm.

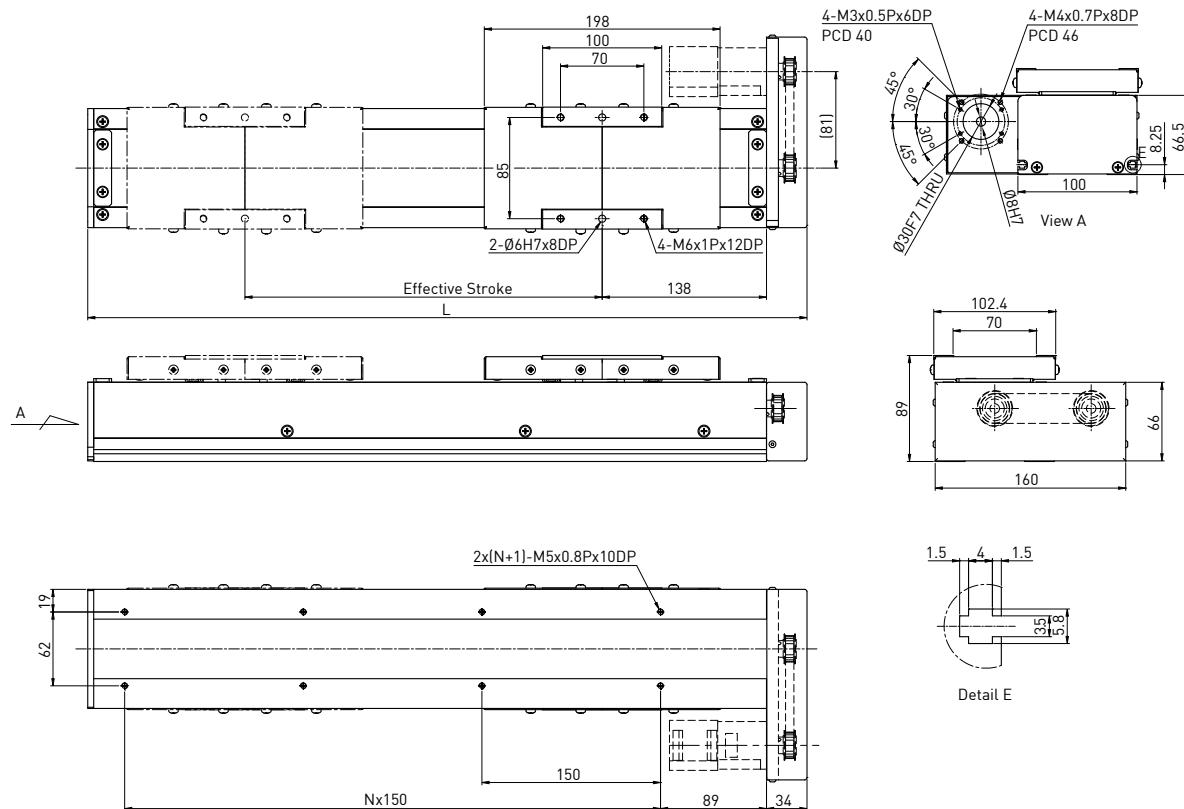

The maximum speed should be decreased by 15% for every 100mm of increased stroke.

** The load condition is based on 10,000km operation.

*** If used on the vertical axis or in a special condition, please contact HIWIN.

Model Number for KS100-FR

KS100	-20	P	-800	A	FR	S2	M
Model	Lead	Precision Grade	Effective Stroke	Slider Type	Motor Flange	Limit Switch	Motor
	10mm 20mm	P: Precision C: Normal		A: Standard	FR: Right	S2: OMRON SX674 None: No Limit Switch	M: Supplied With Motor None: Without Motor

Effective stroke (mm)	L	N	Weight (kg)	AC motor output				W	100			
				Drive	Lead	Rated RPM	Max linear speed*		mm	5	10	20
200	504	2	6.0						RPM	3000	3000	3000
300	604	3	6.9						mm/sec	250	500	1000
400	704	3	7.8						N	280	140	70
500	804	4	8.7						mm	± 0.02		
600	904	5	9.6						mm	200~800		
700	1004	5	10.5						kg	8	6	3.5
800	1104	6	11.4									
				Rated dynamic load**				Fyd	N	20	20	20
								Fzd	N	80	60	35
								Mxd	N-m	1.1	1.2	1.1
								Myd	N-m	0.9	0.9	0.9
								Mzd	N-m	0.9	0.9	0.9
				Permitted load condition***				$\frac{F_y}{F_{yd}} + \frac{F_z}{F_{zd}} + \frac{M_x}{M_{xd}} + \frac{M_y}{M_{yd}} + \frac{M_z}{M_{zd}} \leq 1$				
								Fy, Fz, Mx, My, Mz are working loads				

* Vibration might occur when the effective stroke is longer than 650mm.

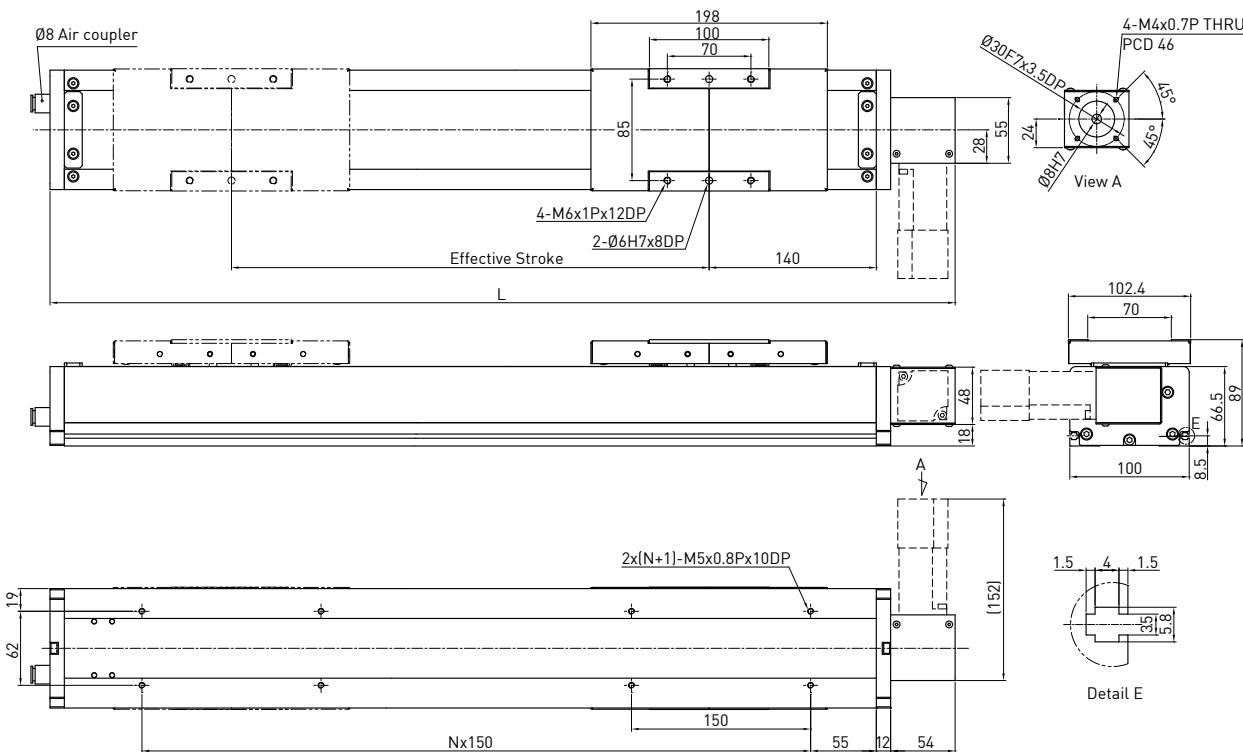

The maximum speed should be decreased by 15% for every 100mm of increased stroke.

** The load condition is based on 10,000km operation.

*** If used on the vertical axis or in a special condition, please contact HIWIN.

Model Number for KS100B-FL

KS100	B	-84	C	-3000	A	FL	S2	M
Model	Timing Belt	Pulley Perimeter	Precision Grade	Effective Stroke	Slider Type	Motor Flange	Limit Switch	Motor
			C: Normal		A: Standard	FL: Left	S2: OMRON SX674 None: No Limit Switch	M: Supplied With Motor None: Without Motor

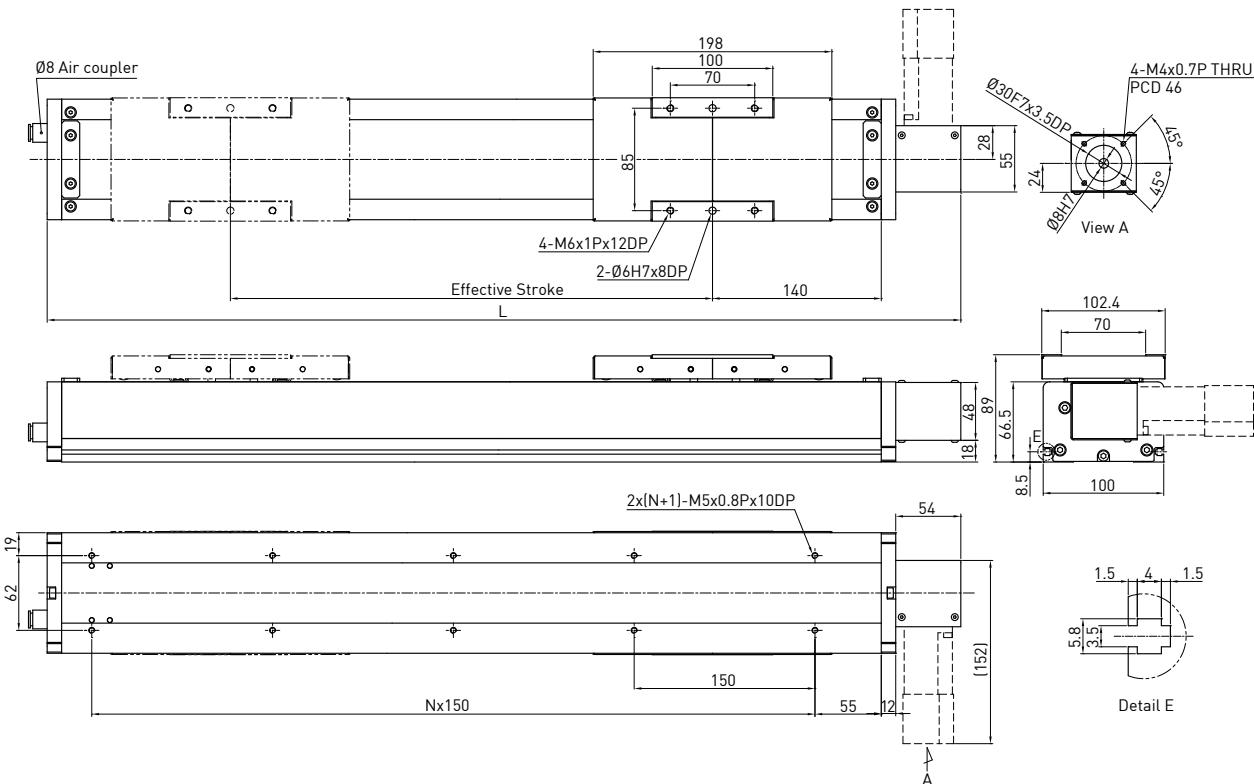

Effective stroke (mm)	L	N	Weight (kg)	AC motor output			W	100
				Drive	Pulley Perimeter	Pulley RPM		
200	558	2	6.1					Timing Belt
400	758	4	7.6					84
600	958	5	9.1					1286
800	1158	6	10.6					1800
1000	1358	8	12.1					33
1200	1558	9	13.6					±0.1
1400	1758	10	15.1					200~3000
1600	1958	12	16.6					3
1800	2158	13	18.1					20
2000	2358	14	19.6	Rated dynamic load*	Fzd	N		30
2200	2558	16	21.1		Mxd	N-m		1.2
2400	2758	17	22.6		Myd	N-m		1
2600	2958	18	24.1		Mzd	N-m		1
2800	3158	20	25.6		$\frac{Fy}{Fyd} + \frac{Fz}{Fzd} + \frac{Mx}{Mxd} + \frac{My}{Myd} + \frac{Mz}{Mzd} \leq 1$			
3000	3358	21	27.1	Fy, Fz, Mx, My, Mz are working loads				

*The load condition is based on 10,000km operation.

**For horizontal applications only. If used in a special condition, please contact HIWIN.

Model Number for KS100B-FR

KS100	B	-84	C	-3000	A	FR	S2	M
Model	Timing Belt	Pulley Perimeter	Precision Grade	Effective Stroke	Slider Type	Motor Flange	Limit Switch	Motor
			C: Normal		A: Standard	FR: Right	S2: OMRON SX674 None: No Limit Switch	M: Supplied With Motor None: Without Motor

Effective stroke (mm)	L	N	Weight (kg)	AC motor output	W	100	
200	558	2	6.1	Drive		Timing Belt	
400	758	4	7.6	Pulley Perimeter	mm	84	
600	958	5	9.1	Pulley RPM	RPM	1286	
800	1158	6	10.6	Max linear speed	mm/sec	1800	
1000	1358	8	12.1	Rated thrust	N	33	
1200	1558	9	13.6	Repeatability	mm	±0.1	
1400	1758	10	15.1	Effective stroke	mm	200~3000	
1600	1958	12	16.6	Max load (H)	kg	3	
1800	2158	13	18.1	Rated dynamic load*	Fyd	N	20
2000	2358	14	19.6		Fzd	N	30
2200	2558	16	21.1		Mxd	N-m	1.2
2400	2758	17	22.6		Myd	N-m	1
2600	2958	18	24.1		Mzd	N-m	1
2800	3158	20	25.6		$\frac{F_y}{F_{yd}} + \frac{F_z}{F_{zd}} + \frac{M_x}{M_{xd}} + \frac{M_y}{M_{yd}} + \frac{M_z}{M_{zd}} \leq 1$		
3000	3358	21	27.1	Permitted load condition**	Fy, Fz, Mx, My, Mz are working loads		

*The load condition is based on 10,000km operation.

**For horizontal applications only. If used in a special condition, please contact HIWIN.
